

**THE MONUMENT (MUON ORDINARY CAPTURE FOR THE NUCLEAR  
MATRIX ELEMENTS IN  $\beta\beta$  DECAYS) PROJECT'S OVERVIEW AND  
ADVANTAGES**

The main idea of the MONUMENT project is carrying out experimental measurements of muon capture at several daughter candidates for  $0\nu 2\beta$  decay nuclei. Obtained results are used to check the nuclear matrix elements calculations. In addition, the nuclear structure and the information of the particle's angular correlations of that process could be clarified.
